Terms of Sale

- All Nursery Stock Orders will be shipped to customers by freight mail or express depending on size and weight, each customer to pay shipping charges and remit to our home office at Newark, N. Y., within FIVE DAYS after arrival at shipping point.

- On Freight or Express Shipments, customer pays the Transportation charges upon arrival—such charges are usually 40c to \$1.50 depending on the size and the weight of the order.

On Parcel Post shipments a postage and insurance charge is included on customer's invoice as follows—1st and 2nd zone, 15c—3rd zone, 20c—4th and 5th zone and up, 25c.

Free Nursery Stock Given Customers To Cover Transportation Charges On Each Order Of \$5.00 Or More

- One Item (our selection) included Free with orders between \$5.00 and \$25.00.
- Two Items (our selection) included Free with orders over \$25.00.

Perennial Orders Shipped Separately By Parcel Post

On all Express and Freight Nursery Stock orders that call for 3 or more Perennial Plants, the perennial plants will be sent to customer separately by Parcel Post. This method assures delivery in field-fresh, ready-to-grow condition. A mailing and insurance charge of 15c per order will be added to each customer's invoice at time of shipment.

Collect Cash In Advance On Orders Of Less Than \$5.00

No advance payment is required on orders of \$5.00 or over. Due to the War Emergency, shortage of help and the work involved in handling small accounts, orders for less than \$5.00 must be sold for cash, to be paid by customer at the time the order is booked.

Order Not Subject To Cancellation

Customer agrees to his contract as follows:—"I understand that this stock is reserved for me immediately and I AGREE NOT TO COUNTERMAND THIS ORDER."

Time of Shipment

FALL SHIPMENTS are usually made during OCTOBER and NOVEMBER—SPRING SHIPMENTS are usually made during MARCH, APRIL and MAY. However, shipment of an order at any specified time is not guaranteed because of weather and other governing conditions over which we have no control.

| Althea Tree, 3 to 4 ft., red, white, T... ¹¹⁵¹ ¹¹⁵² | 1.35 |
| The Altheas are especially desirable as they furnish a profusion of bloom late in the season when other blossoms are scarce. They will bloom freely even in very dry weather, yield readily to any kind of training and are admirable for hedges, screens or individual planting. | |
| Almond, double pink, 2 to 3 ft., MD... ¹¹⁴⁰ | 1.65 |
| Unlike ordinary kinds which are "budded" on Peach Seedlings, our Flowering Almonds are "budded" on hardy, vigorous PLUM SEEDLINGS. This insures "long life", plus the vigor necessary to produce an abundance of beautiful bloom. | |

| Ile de France, (Butterfly Bush), deep violet, MD. ¹¹⁵⁴ .95 | |
|---|--|

A gorgeous flowering shrub recently originated in France. Long, arched, lilac-like, violet-purple clusters bloom in great abundance in mid-summer at a time when scarcely anything is in bloom. The thickly flowered spikes are very showy in the garden and make delightful bouquets. Very fragrant. Vigorous, hardy grower.

| Snowbank Bush , snow-white, 18 to 24 in., MD | 1138 | 1.65 |
| Snowberry , white berries, 2 to 3 ft., MD | 1216 | .95 |

The Snowberry is a shrub of great value—for its fine foliage—slender gracefully bending branches—dainty pink blossoms in June and July. It will thrive in dry barren soil—it will grow in shade so dense that almost nothing else will grow. Large white berries in Fall are very decorative.

| | | |

HOW TO GROW TREE ROSES SUCCESSFULLY

Plant in **SPRING ONLY**. Tie the stem securely to a stake with strips of cloth. Prune back the flowering branches each season to 3 or 4 eyes.

WINTER PROTECTION in Cold Climate: Before freezing weather starts bend the stem over slowly until the head rests on the ground, loosening the roots with a fork on the side opposite from the side the stem is being bent. Drive a stake next to the crown and tie securely. Then cover entire head with soil. Stem can be protected with burlap or paper.

Fruit Department

PAGES 27-34

In this so-called land of plenty—our America—we are faced with the worst food shortage in history, and it is almost a certainty it will be worse before it gets better.

Because of the extreme need for more food, the production of vitamin-filled, fresh, tree-ripened home-grown fruits becomes increasingly important.

Unless home owners and farmers plan immediately to plant a family fruit garden—many will not have enough fresh fruit to meet health needs.

In cooperation with our Government's Victory Garden Program, it is your Patriotic duty to encourage the fulfillment of the Victory Garden Program among village and farm families in your section. You are your community's National Victory Garden Advisor.

In the following Fruit Department you will find a wide selection of essential quick-bearing, heavy-crop Fruit Trees and Bush Fruits for your customers.

ASSURED POLLINATION IS THE RESULT OF PROPER SELECTION AND PLANTING OF "ROOSTER" TREES

Whenever you are selling Apple Trees, Sweet Cherry Trees, Pear Trees, Plum Trees, and Hale Peach Trees, (whether it is only a few for the city back yard, a small farm family fruit garden or an extensive commercial orchard) always suggest planting "Rooster" Trees for assured pollination, the secret of full crops year after year.

Use your new "Rooster Tree Folder" which pictures the "Rooster" Apple Trees and contains Pollination Charts for Apples, Sweet Cherries, Pear, Plum and Hale Peach Trees.

Also—Tell the convincing "Rooster" Tree story you will find given in full detail on page 38 of your Fruit Demonstration Book Sales Manual and picturized for your customer on page 22 of your Fruit Demonstration Book.

This service is provided by our trained Nursery salesmen. It's a service that assures full fruit production from each fruit tree you sell.

All sizes of Fruit Trees refer to height above roots.

Peach Trees

For Spring Planting Only

**PEACH TREES WILL LIVE AND GROW BETTER IF
PLANTED IN THE SPRING. FALL PLANTING
IS NOT RECOMMENDED**

Peach trees, unlike other Fruit Trees, do not become dormant early in the Fall, that is, the sap does not return to the roots as early as with other types of Fruit Trees.

As a result of this condition, should the Winter be severe the losses on Fall Planted Peach Trees is apt to be heavy. To eliminate this possibility we recommend that Peach Trees be planted in the **SPRING**. All other Fruit Trees can be planted either in the Fall or Spring.

Research indicates that the mortality loss experienced by our customers in transplanting Sweet Cherry Trees is far less when one year old trees are planted.

Based on these research figures and wishing to create better customer relationship we offer only Standard First Quality, ONE YEAR OLD Sweet Cherry Trees.

These one year old trees make a quicker start than larger, older trees — they develop faster, produce fruit quicker and create greater customer satisfaction.

TOP QUALITY STAWBERRY PLANTS FOR YOUR CUSTOMERS

Many people have the mistaken idea that August is the best time to plant Strawberry Plants. The fact is, the only plants which could possibly be planted in August are either Old Plants which have borne one or more crops of Fruit, or Pot Plants. The first are not satisfactory and the second are impractical.

The plants we sell are field grown New Plants, and under normal growing conditions it is impossible to develop a rugged, heavy, fibrous-rooted new plant for August shipment. They are not fully developed until late September, and cannot be shipped earlier. Do not promise earlier delivery.

The original plant that produces new plants is not allowed to produce Fruit. Thus, the surplus growing strength and vigor that would ordinarily be consumed in producing strawberries is transmitted by nature from the Mother plant to her offspring, resulting in producing vigorous, heavy-rooted, top quality plants, capable of bearing profitable crops of First Quality Berries. Only the plants that develop close to the Mother plant are used. Weak, inferior quality plants that grow at the end of the runners are not used in filling our orders.

Every Customer Should Know

About - - -

Our 7 Points of Superiority

1. **PEDIGREED PARENTAGE**—"As important in Nursery Stock as in breeding horses, cows, and dogs."
2. **SHIELD-TYPE BUDDING**—"A Tiny detail of immense importance."
3. **INDIVIDUAL SPACING**—"Fewer Trees per acre insure big strong growth."
4. **SCIENTIFIC ROOT PRUNING**—"Vigorous Growth and permanent satisfaction insurance."
5. **CONTROLLED POLLINATION**—"Insures a full yield of fresh fruit year after year."
6. **MOISTURE-CONTROL PACKING**—"Delivery in field-fresh condition."
7. **INSPECTION BY THE FAMOUS AUTHORITY—DR. SHAW AND ASSOCIATES**—"Assures True-to-Name Stock."

These 7 points of Superiority (fully explained in detail in your "7 Reasons Why" Booklet and the "Sales Manual for Fruit Demonstration Book")—sells your quality so well that price is put forever in the discard. And selling quality is so important that, if you should make the sale before telling your customer about our 7 Reasons of Superiority, then by all means explain each reason after the order is written and signed.

Here's the reason why; after you've left with your order, the purchaser may pick up a mail-order catalog or be solicited by a peddler of cheap, low-grade nursery stock. Your customer doesn't know anything about pedigreed stock or about all the other elements that go into producing what you have sold. Then your customer is left with an unanswered question in his mind—an unexplored or unexplained doubt. As a result, he may try to cancel; he may refuse to accept shipment; or he may talk to, and sour other prospects in your territory.

End every sale with a talk and explanation of the points on what makes quality, how much it means and how little the difference in price means between the highest quality and low-price, job-lot nursery stock.

To estimate the number of plants required for an acre at any given distance, multiply the distance between the rows by the distance between the plants, which will give the number of square feet allotted to each plant, and divide the number of square feet in an acre (43,560) by this number. The quotient will be the number of plants required.
